

### PRODUCT DESCRIPTION

Dynasound's DS2022 return-air grill attenuator is designed for quick and easy installation into ceiling return-air grills in 2x2 suspended ceiling grid systems. The DS2022 is used to acoustically treat open return-air grills for sound masking uniformity by attenuating the amount of sound that can pass directly through.

The DS2022 is sized for a standard 2'-0" X 2'-0" return-air ceiling grill. Its center perforation allows for the attenuator's steel planes to pitch upward and create a deflective effect when an acoustical "hot spot" poses a uniformity problem. When properly installed the DS2022 will attenuate as much as 10 decibel (dB) of sound.

The DS2022 is also used to minimize cross-talk between adjacent closed offices or closed offices bordering open office areas.

### FEATURES

- Provides sound attenuation for open return-air grills for sound masking uniformity
- Reduces cross-talk in adjacent closed office plans
- Sized to fit standard 2' X 2' grid
- Twenty-four gauge galvanized steel construction

### TECHNICAL SPECIFICATIONS

<b>Construction:</b>	24-gauge galvanized steel
<b>Dimensions:</b>	Standard 2'-0" x 2'-0" ceiling tile opening
<b>Shipping Weight:</b>	3 lbs.
