

SOUND MASKING IN HEALTHCARE ENVIRONMENTS

CASE STUDY — Florida Hospital Wesley Chapel

Florida Hospital Wesley Chapel

Space: A hospital with over 200,000 square feet spanning three stories. Patient rooms feature large floor to ceiling windows and nine foot ceilings

Challenge: Patient privacy and unwanted sound transmissions in patient rooms and public areas

Solution: Qt 600™ sound masking system with zones for patient rooms, emergency rooms, hallways, the main lobby, nurses' stations, and operating rooms

Result: Peaceful rooms that allow patients to speak privately with their family members, physicians, and clinical staff

Challenge

Creating an environment to focus on the whole patient: mind, body and spirit

Florida Hospital Wesley Chapel is committed to providing high quality patient care in a state-of-the-art healthcare environment. "Our entire facility was intentionally designed to promote patient healing, comfort, and privacy," said Tracy Clouser, Director of Marketing for Florida Hospital Wesley Chapel.

"Everything from our building to policies to our hand selected staff was created with the patient in mind."

The 201,909 square foot hospital is spread across three stories. Expansive patient rooms feature large floor to ceiling windows, nine foot ceilings, and an interactive multimedia system that allows patients to communicate with family members and learn more about their ailments. "Every patient room has a view of our beautiful natural surroundings to increase patient comfort and relaxation during their recuperation," added Clouser.

The patient room design and features presented several acoustic challenges for hospital administrators. The expansive windows reverberate sound in the patient rooms, leading to possible privacy and acoustic comfort issues.

Connecting each area of the hospital are uniquely designed hallways and spaces. The hallways are built with a slight curvature and include side mounted lighting. These slightly curved hallways grant nurses the ability to see down the length of the hallway from their stations. Additionally, the hospital features a large

Florida Hospital Wesley Chapel

lobby with a three-story atrium featuring an all-glass front to allow in lots of natural light. These features improve the patient comfort and staff productivity, but could lead to sounds being carried across great distances.

Solution

“To ensure patient privacy and comfort in all 83 patient rooms, 18 emergency rooms, hallways, the main lobby, nurses’ stations, and operating rooms, we deployed sound masking,” said John Crouch, Director of Facilities. With the unique design of the space and the hospital’s commitment to patient privacy and comfort, the best choice for Florida Hospital Wesley Chapel was a sound masking system from Cambridge Sound Management. Four Qt 600 systems were installed along with a network of 700 Qt emitters.

The system was installed by SoundStage (www.soundstageinc.com), a CSM partner based in Winter Park, Florida. Sound Stage presented the Qt Quiet Technology sound masking system to the hospital in addition to other AV solutions that the hospital was deploying.

Result

Sound masking helps Florida Hospital ensure the whole patient is treated

With the Qt system deployed in over 70% of the facility, Florida Hospital Wesley Chapel not only provides highly competent specialists to heal a patient’s body, but it also provides an environment that promotes healing and comfort for patients and visitors. “We know the environment is an important aspect of the healing process,” commented Clouser. “The Qt sound masking system is a perfect example

Slightly curved hallways grant nurses the ability to see down the length of the hallway from their stations.

“The system works exactly as designed and the system is extremely easy to use and maintain.”

Florida Hospital Wesley Chapel

of how every detail of the hospital was carefully considered to promote patient healing and comfort.” With no restrictions on visiting hours, the Qt system blocks out hallway noise so patients and visitors can get a peaceful night’s rest. In addition to having all-private rooms, the system helps patients converse privately with family members, physicians, and clinical staff.

This attention to detail is working. The hospital ranks in the 94th percentile for quietness among hospitals across the U.S. that use the Press Ganey survey for patient satisfaction.

“The system works exactly as designed,” said Crouch. “And the system is extremely easy to use and maintain.” With the Qt Quiet Technology system, the hospital experiences no acoustic hot or cold spots, ensuring uniform sound masking coverage. It is also straightforward to maintain a consistent background sound level throughout the entire facility making the sound masking unnoticeable to the hospital’s patients and staff.

While aesthetically pleasing, these large open spaces can allow for sounds to carry great distances. With sound masking, speech becomes unintelligible within these open spaces.

“**Our entire facility was intentionally designed to promote patient healing, comfort, and privacy. Everything from our building to policies to our hand selected staff was created with the patient in mind.**”
