WHO WE ARE
Cambridge Sound Management, Inc. is the world’s largest provider of sound masking solutions.

Our award winning QtPro and DynasoundPro sound masking technology helps organizations of all sizes protect speech privacy, reduce noise distractions, and increase workplace productivity.

WHAT WE DO
We design and manufacture next generation sound masking solutions to help organizations create more comfortable, secure, and productive workplaces.

Our proprietary sound masking technology works by adding a low level, unobtrusive background sound to an environment, such as an open office, private office, call center, or lobby. The ambient, specially-optimized sound masking drastically reduces the intelligibility of human speech. The result is a workplace that is measurably more acoustically comfortable and private without sacrificing the architectural design of the space.

OUR HISTORY
We were founded in Cambridge, MA in 1999 by a renowned acoustician and MIT PhD.

Cambridge Sound Management’s innovative commercial sound masking quickly gained popularity by making the technology more effective, user-friendly, and accessible. Over 20,000 companies and more than half of the Fortune 100 now utilize Cambridge Sound Management sound masking systems in their facilities.

In 2016 Cambridge Sound Management acquired another sound masking pioneer, Dynasound, an innovator in the industry since 1975. The combination of the two most respected brands in sound masking created the only company that can meet any sound masking specification, architectural challenge, or customer requirement.
Our next generation sound masking solutions have applications in every industry.

ADVANTAGES OF CAMBRIDGE SOUND MANAGEMENT’S SOUND MASKING SYSTEMS

• The most advanced and widest portfolio of sound masking products and solutions
• The largest network of professional and certified installers and field engineers
• The most effective sound masking systems available
• The lowest impact installation and the best solution for both new construction and retrofits
• Completely scalable solutions suitable for any size space
• Office paging, background music, and sound masking capabilities all from a single loudspeaker
• Network capabilities for easy control, customization, and system integration
• An affordable alternative to expensive construction projects or sound blocking materials
• GreenSpec listed and the most energy efficient sound masking systems available
• Helps contribute to LEED Certifications
