

ADD ACOUSTICAL COMFORT AND PRIVACY TO YOUR CUSTOMER EXPERIENCE

Sound Masking adds an unobtrusive airflow-like sound to environments that masks distant conversations, making the space feel more private. Conversations over 15 feet away fade into the background ambience, making customers feel more comfortable discussing personal, financial, or medical information. Background music and voice overs can be laid over the masking audio, further enhancing the customer experience. Sound masking has benefits for multiple industries including:

- Retail pharmacies
- In-store walk-in clinics
- Retail banks
- Grocery stores
- Spas and massage therapy outlets
- Auto dealerships
- Brick and mortar retail stores

Visit cambridgesound.com for more information or to schedule a demo.

See why these companies and hundreds more trust sound masking from Cambridge Sound Management to protect speech privacy and improve customer experience at their in-store locations.
